

Junior Blockchain Engineer

ABOUT

A self-taught Blockchain Engineer and technology enthusiast. On a professional development path in Blockchain/Full-Stack Development. Privately passionate about FinTech and Rust and GO languages.

EXPERIENCE

- Strong foundation in blockchain technology and its underlying principles.
- Actively seeking to explore new advancements in the blockchain space and contribute to the development of decentralized applications.
- Committed to contributing my ideas and collaborating with senior developers to deliver innovative and secure blockchain solutions.

TECH STACK

- TypeScript
- JavaScript
- GO
- Rust

EMPLOYMENT HISTORY

FullStack Engineer, BrainworkZ

November 2022 – Present

At BrainworkZ, I am currently building a platform in the AdTech industry. We use the open DV360 API and Facebook Graph API. All in Angular/Nestjs. In addition, we implement machine learning to increase the efficiency of optimization of advertising campaigns.

Junior Blockchain Developer, Veriori SA

November 2021 – December 2022

In Veriori SA I developed two projects: MoonieNFT and VAIOT AI. In MoonieNFT I was responsible for the development of smart contracts and fullstack development of the platform: <https://portal.moonie.io/>. In VAIOT AI I was responsible for building neural networks of the VAIOT assistant in GO language.

EDUCATION

Computer Science, University of Humanities and Economics in Łódź

October 2021 – Present

The program is giving me solid foundation in various computer science principles and programming languages and knowledge of algorithms, data structures, software development methodologies, and computer architecture.
